## Abstracts

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Robotics market for 2018-2023.

Robotics is the interdisciplinary branch of engineering and science that includes mechanical engineering, electrical engineering, computer science, and others. Robotics deals with the design, construction, operation, and use of robots, as well as computer systems for their control, sensory feedback, and information processing.

The Robotics industry had an explosive growth in recent years. Many families and commercial enterprises or associations choose the Robotics. The reduced time for household or commercial activities is increasing the adoption of Robotics by the end-users for replacing their physical works.

At present, in global, the Robotics industry is generally at a more advanced level. The world's largest manufacturer is Fanuc which accounted for approximately 9.16% of the global revenue of cleaning robots in 2016.

Currently, China has become the largest consumption region at now, its output value accounted for more than 16.46% of the total output value of global Robotics market in 2016 and it is expected that China will also be the largest market in forecast period 2017-2022.

Over the next five years, LPI(LP Information) projects that Robotics will register a 4.8% CAGR in terms of revenue, reach US\$ 25900 million by 2023, from US\$ 20500 million in 2017.
