## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Roller Bearing market for 2018-2023.

Roller Bearings are a type of rolling-element bearing that uses cylinders (rollers) to maintain the separation between the moving parts of the bearing (as opposed to using balls as the rolling element). The purpose of a roller bearing is to reduce rotational friction and support radial and axial loads. Compared to ball bearings, roller bearings can support heavy radial loads and limited axial loads (parallel to the shaft).

Roller Bearings are a type of rolling-element bearing that uses cylinders (rollers) to maintain the separation between the moving parts of the bearing. The primary end market for this type of bearing is the industrial and automotive industry. In 2015, demand from general and heavy machine industry contributed 61.21% share, followed by Automotive with 20.98% share.

Commonly, roller bearings can be divided into many types, tapered roller bearing, cylindrical roller bearings, needle roller bearings and others. Among these types, tapered roller bearing is the most basic and widely used one. In 2015, production of tapered roller bearing reached to 9242 million units.

Over the next five years, LPI(LP Information) projects that Roller Bearing will register a 2.7% CAGR in terms of revenue, reach US\$ 24900 million by 2023, from US\$ 21300 million in 2017.
