In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Rotary Friction Welding market for 2018-2023. Rotary Friction Welding: a solid-state process in which one part is rotated at a high speed, and then pressed against another part that is held stationary. The resulting friction heats the parts, causing them to forge together.

Rotary Friction Welding — most popular type of friction welding and used for parts where at least one piece is rotationally-symmetrical such as tube or bar.

As the technology of Rotary Friction Welding Machines is relatively mature and the downstream market, especially for automobile is growing fast, so there are lots of enterprises in the Rotary Friction Welding Machine market. The high-end rotary friction welding machine was mainly produced in Japan, Europe and United States because their advanced R&D lever, but most of the products were consumed in developing countries especially in Southeast Asia where the machining accuracy is lower.

Considering the truth that manufacturing of rotary friction welding machine is highly Technology-Intensive, so it is a wise decision for a new company which only has money while lack of professional R&D team and core technologies to keep calm when has a plan to enter this field.

Over the next five years, LPI(LP Information) projects that Rotary Friction Welding will register a 1.5% CAGR in terms of revenue, reach US\$ 200 million by 2023, from US\$ 180 million in 2017.
