## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Rubber Conveyor Belt market for 2018-2023. The conveyor belt is an endless band that transfers the material conveyed between two points. A conveyor belt is comprised of a reinforced member, or carcass, and a protective covering. Conveyor belts are generally a composite of rubber or some elastomer such as PVC and fabric or some other reinforcement. The elastomer is the external covering which provides wear ability and protection from the handling environment. The fabric carcass internally serves as the strength bearing member for supporting the load and to control stretching of the belt.

Viewed from the demand side, the current demand for conveyor belt product is relatively low, mainly because that many using industries like steel industry is in trouble. Of course, there is also a certain space in the conveyor belt product demand market, but basically showing the scarcity of high-end products, low-end products is excess capacity, there is a large market demand for high-end products to seize market share of imports.

Although sales of conveyor belt brought a lot of opportunities, the study group recommends the new entrants just having money without technical advantage and upstream and downstream support do not to enter the conveyor belt field.

Over the next five years, LPI(LP Information) projects that Rubber Conveyor Belt will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
