Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Samarium market for 2018-2023.

Samarium is one rare earth element, from the mineral. Samarium, atomic no. 62, symbol Sm, weight at 150.36. It is a silvery-white metal belonging to the lanthanide group of the periodic table. It is relatively stable at room temperature in dry air, but it ignites when heated above 150 C and forms an oxide coating in moist air.

One of the most important applications of Samarium is in samarium–cobalt magnets, which have a nominal composition of SmCo₅ or Sm₂Co₁₇.

China's decision to scrap export quotas and taxes on rare earth elements may boost stalled demand for the products. It is an opportunity for the giant manufacturers to expand production capacity and improve the company's market share.

China is responsible for more than 95% of the global supply of rare earths. For the Samarium industry, there are two major consumption channels for the production: domestic consumption and export. In addition, the major exporting countries are USA, Japan and Europe etc. In 2015, the export production of Samarium is estimated to 24.36% in China.

Over the next five years, LPI(LP Information) projects that Samarium will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.

This report presents a comprehensive overview, market shares, and growth opportunities of Samarium market by product type, application, key manufacturers and key regions.
