Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Satellite market for 2018-2023.

A satellite is an object that orbits another object. In space, satellites may be made by man, or they may be natural. Of course, the market we research on is based on artificial satellites in this report.

Artificial satellites come from more than 50 countries and have used the satellite launching capabilities of ten nations. A few hundred satellites are currently working, but thousands of unused satellites and satellite fragments orbit the Earth as space debris.

The largest satellite is the International Space Station, which was put together by several different countries (including the organizations of NASA, ESA, JAXA and RKA).

Satellite manufacturing revenues grew by 10%, faster growth than 2014, due to smaller number of expensive commercial GEO and government satellites launched in 2014, partially offset by increase in total number of satellites launched

Launch industry revenues grew by 8.33% in 2015, reflecting higher number of U.S. launches of commercial satellites.

Over the next five years, LPI(LP Information) projects that Satellite will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.

This report presents a comprehensive overview, market shares, and growth opportunities of Satellite market by product type, application, key manufacturers and key regions.
