Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Saw Palmetto Berries market for 2018-2023. The saw palmetto is a short, scrubby palm that grows in the coastal plain of Florida and other southeastern states. Its fan-shaped leaves have sharp, saw-toothed edges that give the plant its name. Dense clumps of saw palmetto can form an impenetrable thicket. The abundant 2-cm-long berries are harvested from the wild in the fall and are dried by processor. Then the dried saw palmetto is used in the pharmaceutical industry and dietary supplement industry.

Since more and more saw palmetto has been used in the treatment of disturbances due to Benign Prostate Hypertrophy (BPH) including reduction of urinary frequency, increase of urinary flow, and decrease of nocturia, market participants are optimistic on the future market of the whole saw palmetto industry.

There is no doubt that USA is the largest producer of dried saw palmetto berries since fresh saw palmetto berries just have a few days' expiration date. Companies from other countries are impossible to treat the fresh saw palmetto berries since fresh saw palmetto berries will go decayed on the way of transportation.

USA is also the largest consumer of saw palmetto berries with 3594 MT being consumed in the year of 2016. Europe is the follower with 40.87% consumption share in the same year.

Legal picking and authenticity are the key factors for saw palmetto berries. Presently, there are still many illegal pickers and the authenticity of saw palmetto berries can't be distinguished easily. The saw palmetto industry still needs regulations to promote the whole industry' health development.

Over the next five years, LPI(LP Information) projects that Saw Palmetto Berries will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
