## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Sclareolide market for 2018-2023.

Sclareolide is a sesquiterpene lactone natural product derived from various plant sources including *Salvia sclarea*, *Salvia yosgadensis*, and cigar tobacco. It is a close analog of sclareol, a plant antifungal compound. It is used as a fragrance in cosmetics and has been more recently marketed as a weight loss supplement, though there is no clinical evidence to support this effect.

The global consumption value of sclareolide increases with the 1.10% average growth rate. Europe is the mainly consumption region due to the bigger demand of downstream applications. In 2016, consumption volume of Europe reached 99.88 MT, which occupied 82.74% % of the global consumption volume.

We tend to believe this industry is a rising industry, and the consumption increasing degree will show a smooth growth curve. And the price presents decreasing trend according to the economy development status and international competition. Also, there is fluctuation in gross margin.

Over the next five years, LPI(LP Information) projects that Sclareolide will register a 0.1% CAGR in terms of revenue, reach US\$ 45 million by 2023, from US\$ 45 million in 2017.
