In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Sensors in the Smart Home market for 2018-2023.

A sensor is a device, module, or subsystem whose purpose is to detect events or changes in its environment and send the information to other electronics, frequently a computer processor. A sensor is always used with other electronics, whether as simple as a light or as complex as a computer.

Sensor technology, along with Artificial Intelligence, Big Data analytics, and IoT-enabled devices, will drive the adoption of smart home appliances as they provide competitive safety and security advantages and ubiquitous solutions. Threats from the lack of practical knowledge processing and consumer awareness as well as consumer misperceptions and concerns over data security have restrained rapid realization of smart homes. Collaboration with start-up companies will facilitate rapid growth

Over the next five years, LPI(LP Information) projects that Sensors in the Smart Home will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
