The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Serial Device Server market for 2018-2023. A serial port server, also called a serial server or port redirector, is a device that transfers data between a computer serial port (COM port) and an Ethernet local area network (LAN). This makes it possible to use Ethernet in place of serial cables, minimizing workstation clutter and also allowing serial devices to be placed far away from the computers with which they are used.

Taiwan has the largest global export quantity and manufacturers in Serial Device Server market, while the China is the second sales volume market for Serial Device Server in 2016.

Serial Device Server technology is very mature now, and new enterprises can not surpass existing famous brands on reputation or design in the short term. So, the study group recommends the new entrants need to be considered carefully before enter into this field.

Over the next five years, LPI(LP Information) projects that Serial Device Server will register a 3.3% CAGR in terms of revenue, reach US\$ 320 million by 2023, from US\$ 260 million in 2017.
