Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Silage Films market for 2018-2023.

Silage film is a Silage Film used in farmland for protection and storage of forage, silage, hay and maize in areas where the growth period of herding grass is relatively short. Bundling of silage using tacky films helps in transportation and delivery.

Silage films maintain the nutritional value of forage plants such as corn, vegetables, and grasses that continue to respire after cutting.

Europe is the main manufacturing country in the world. For after decades of development, the number of firms in Europe has been increasing from the first of several to the current more than thousand in which there are more and more sizable companies.

The classification of Silage Films includes LLDPE, LDPE, EVA/EBA, HDPE and other. The proportion of LLDPE Silage Films in 2017 is about 62.80%, and the proportion of LDPE Silage Films in 2017 is about 17.54%. Silage films maintain the nutritional value of forage plants such as corn, vegetables, and grasses that continue to respire after cutting. Silage film excludes the air so lactic acid fermentation can take place, leaving a feed rich in vitamins and carotene.

Over the next five years, LPI(LP Information) projects that Silage Films will register a 5.9% CAGR in terms of revenue, reach US\$ 1370 million by 2023, from US\$ 980 million in 2017.
