In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Simethicone market for 2018-2023.

Simethicone is a mixture of polydimethylsiloxane and hydrated silica gel. It is an orally administered anti-foaming agent used to reduce bloating, discomfort or pain caused by excessive gas-mainly swallowed air, with small amounts of hydrogen and methane-in the stomach or intestines.

Simethicone is produced by polydimethylsiloxane and silicon dioxide at proper temperature and pressure. So, production process of simethicone is relatively simple. We tend to believe this industry is an emerging industry, and the consumption increasing degree will show a smooth growth curve. For product prices, the slow downward trend in recent years will maintain in the future as competition intensifies. Besides, prices gap between different brands will go narrowing gradually. Also, there will be fluctuation in gross margin.

Over the next five years, LPI(LP Information) projects that Simethicone will register a 1.5% CAGR in terms of revenue, reach US\$ 30 million by 2023, from US\$ 28 million in 2017.
