The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global SLAM Robots market for 2018-2023.

This report studies the SLAM Robots market, Simultaneous localization and mapping, or SLAM for short, is the process of creating a map using a robot or unmanned vehicle that navigates that environment while using the map it generates. SLAM is technique behind robot mapping or robotic cartography. The robot or vehicle plots a course in an area, but at the same time, it also has to figure out where its own self is located in the place. The process of SLAM uses a complex array of computations, algorithms and sensory inputs to navigate around a previously unknown environment or to revise a map of a previously known environment. SLAM enables the remote creation of GIS data in situations where the environment is too dangerous or small for humans to map.

The key players are Swisslog (KUKA), Omron Adept, Clearpath Robotics, Vecna, Mobile Industrial Robots, SMP Robotics, Aethon, Locus Robotics, Fetch Robotics, Hi-Tech Robotic Systemz, Amazon Robotics and so on. Among them, Swisslog (KUKA) and Omron Adept are the leader of SLAM Robots market.

SLAM Robots are largely more cost-efficient compared to human labor, which allows for a greatly expanded list of economically feasible services. This is because most of the currently demanded services were originally offered with the cost of human labor in mind, rather than creating an affordable robot. It is also important that a single operator can manage multiple robots at the same time. Thanks to modern communication technologies, the robots' performance can be controlled remotely. In the near future, the service market is expected to experience drastic changes, due to the increased availability of mobile robots. Soon, the most economically attractive and advantageous

use for the SLAM robots will be seen in the tailor-made tasks based in the reality of our increasingly robotized global environment and its emerging brand-new markets.

The industry is expected to remain innovation-led, with frequent acquisitions and strategic alliances adopted as the key strategies by the players to increase their industry presence. Meanwhile, optimize product mix and further develop value-added capabilities to maximize margins. Manufacturers can take advantage of this situation by reinforcing their production units and supply-chains to avoid any delay in production turn-around-times (TAT) and supply-lead-times.

Over the next five years, LPI(LP Information) projects that SLAM Robots will register a 16.6% CAGR in terms of revenue, reach US\$ 460 million by 2023, from US\$ 180 million in 2017.
