In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Sodium Starch Glycolate market for 2018-2023.

Sodium starch glycolate is the sodium salt of carboxymethyl ether. Starch glycolates are of rice, potato, wheat or corn origin. Sodium starch glycoate is a white to off-white, tasteless, odorless, relatively free flowing powder.

Sodium starch glycolate is used as a pharmaceutical grade dissolution excipient for tablets and capsules. Sodium starch glycolate absorbs water rapidly, resulting in swelling which leads to rapid disintegration of tablets and granules. It is used as a disintegrant, a suspending agent and as a gelling agent. Without a disintegrant, tablets may not dissolve appropriately and may affect the amount of active ingredient absorbed, thereby decreasing effectiveness.

Sodium starch glycolate is also used in formulations containing other filler-binders, such as mannitol and the dicalcium phosphates.

On the basis of type, the sodium starch glycolate market is segmented into SSG (Corn Starch), SSG (Potato Starch), and SSG (Others). The SSG (Corn Starch) segment is expected to account for the larger share of the global market in 2017.

End-users, included in this market are pharmaceutical uses, food uses, and other uses. The pharmaceutical uses application is expected to account for the largest share of the global market in 2017.

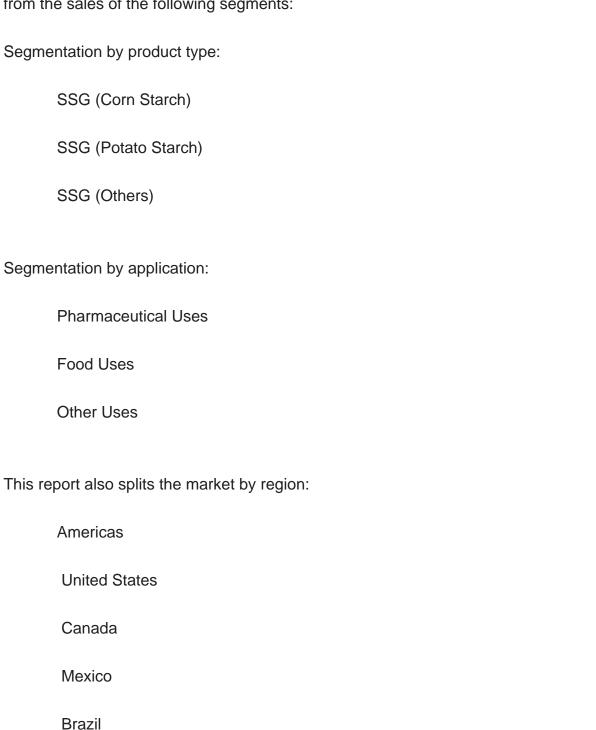

Over the next five years, LPI(LP Information) projects that Sodium Starch Glycolate will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx

million in 2017.
