## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Sodium-Sulfur Battery market for 2018-2023.

This report studies the Sodium-Sulfur Battery (NaS) market, A sodium–sulfur battery is a type of molten-salt battery constructed from liquid sodium (Na) and sulfur (S). This type of battery has a high energy density, high efficiency of charge/discharge (89–92%) and long cycle life, and is fabricated from inexpensive materials. However, because of the operating temperatures of 300 to 350 °C and the highly corrosive nature of the sodium polysulfides, such cells are primarily suitable for large-scale non-mobile applications such as grid energy storage.

Currently, there are many producing companies in the world. The main market players are NGK

Sesse-power, Wuhuhaili, Qintang New Energy. The production value of Sodium-Sulfur Battery is about 14.1 Million USD in 2016.

In production market, the global production value has decreased to 30.0 Million USD in 2017 from 140.3 Million USD in 2014.

Japan is the largest production regions of Sodium-Sulfur Battery, with a production value market share nearly 81.73% in 2016.

Over the next five years, LPI(LP Information) projects that Sodium-Sulfur Battery will register a 64.3% CAGR in terms of revenue, reach US\$ 590 million by 2023, from US\$ 30 million in 2017.
