Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Solar Pump Inverter market for 2018-2023.

Solar pumping inverter converts DC current from the solar array into AC current to drive the pump. With the function of MPPT (maximum power point tracking), it regulates the output frequency according to irradiation in real time to achieve the maximum power.

Solar Inverters Features:

1. Adopting the proposed dynamic VI maximum power point tracking (MPPT) control method; Fast response and stable operation; Better than the conventional methods which may lead to the problems including poor tracking performances, unstable or even cause water hammer damaging when the irradiation on the array changes rapidly.
2. The solar pumping inverters system is dispensed with energy storing devices, and stores water instead of electricity. It improves the reliability of the device, at the same time, it lowers the construction and maintenance costs of the system dramatically.
3. Digital control; automatic operation and data acquisition/storage of 8 years, etc; 98% of conversion efficiency, and complete protection.

4. In-line blocks; user friendly; convenient for operating; perfect cooling and shielding.

The EMEA average price of Solar Pump Inverter is in the decreasing trend, from 140 USD/KW in 2013 to 129 USD/KW in 2017. With the situation of EMEA economy, prices will be in decreasing trend in the following five years.

The classification of Solar Pump Inverter includes Single Purpose and Multipurpose solar pump inverter. The proportion of Single Purpose in 2017 is about 95%.

Europe region is the largest consumption of Solar Pump Inverter, with a consumption market share nearly 73% in 2017. Africa is the second largest consumption of Solar Pump Inverter, enjoying consumption market share nearly 16% in 2017.

Over the next five years, LPI(LP Information) projects that Solar Pump Inverter will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
