In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Solder Paste market for 2018-2023.

Solder paste is a suspension of solder particles in a solder flux, which is widely used in the electronic assembly materials.

Currently China has become international solder paste large consumption country, but the production technology is relatively laggard, the manufacturers can only produce some low-end product, although after 2010 the new production lines is expanding, the technology is still relying on import.

The solder paste is mainly used in printed circuit board, integrated circuit package, which widely used in the electronics industry. As the electronics industry develops, there is a growing demand to increase the package density of components on a substrate. Along with this, performance and quality requirements for solder pastes have become more demanding.

Solder Paste industry is a low concentration industry. As electronic foundry industry transfer to China mainland, many new entrants enter into this industry, and small enterprises accounted for a large part of the market.

Over the next five years, LPI(LP Information) projects that Solder Paste will register a -6.7% CAGR in terms of revenue, reach US\$ 370 million by 2023, from US\$ 570 million in 2017.
