In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Specialty Oilfield Chemicals market for 2018-2023.

Specialty oilfield chemicals refers to a series of chemicals used in the process of petroleum and gas drilling, mining and transportation, water treatment and enhanced oil recovery. The applications of specialty oilfield chemicals in oilfield include drilling fluids, cementing, completion, stimulation, production and EOR (Enhanced Oil Recovery Chemicals), delivery, etc.

Currently, specialty oilfield chemicals market has a certain potential in Europe, Middle East. These areas demand are relatively stable. In China, specialty oilfield chemicals industry maintained a rapid growth. Rapid growth in unconventional oil and gas activity in North America has resulted in increases in the volume of chemicals used and, based on the projected growth in this area; the volumes consumed in the future will represent a significant portion of the market. Growth in Latin America, particularly in Brazil, the industry maintained a relatively fast growth rate. Africa has seen significant growth across the continent and growth is forecast to continue over the next five years. There are questions about political instability in some countries, such as Libya and Sudan. However, we hold confidence in Africa. The global oil field chemical industry is dominated by large corporations, and these corporations are becoming larger through acquisitions, allowing themselves to offer a wider range of oil field services such as exploration, drilling, design, and engineering. E.g.: Halliburton recently announced plans to acquire Baker Hughes in 2015. Solvay, Nalco Champion, Innospec, Calumet and Lubrizol have acquired a number of companies.

Over the next five years, LPI(LP Information) projects that Specialty Oilfield Chemicals will register a 3.6% CAGR in terms of revenue, reach US\$ 36100 million by 2023, from US\$ 29200 million in 2017.
