Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Spices market for 2018-2023.

A spice is a dried seed, fruit, root, bark, or vegetable substance primarily used for flavoring, coloring or preserving food. Because they tend to have strong flavors and are used in small quantities, spices tend to add few calories to food. Many spices, however, can contribute significant portions of micronutrients to the diet.

A spice may have other uses, including medicinal, religious ritual, cosmetics or perfume production, or as a vegetable.

A spice may be available in several forms: fresh, whole dried, or pre-ground dried.

Generally, spices are dried. A whole dried spice has the longest shelf life, so it can be purchased and stored in larger amounts, making it cheaper on a per-serving basis.

Some spices are not always available either fresh or whole, for example turmeric, and often must be purchased in ground form. Small seeds, such as fennel and mustard seeds, are often used both whole and in powder form.

In this report, it includes the dried plant product used primarily for seasoning purposes or medicine effectiveness etc.

ASTA defines spices as “any dried plant product used primarily for seasoning purposes”. Included are tropical aromatics (pepper, cinnamon, cloves, etc.), leafy herbs (basil, oregano, marjoram, etc.), spice seeds (sesame, poppy, mustard, etc.) and dehydrated vegetables (onions, garlic, etc.). Blends such as curry, chili powders, poultry seasoning, etc. are part of the spice shelf, too.

Over the next five years, LPI(LP Information) projects that Spices will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.

This report presents a comprehensive overview, market shares, and growth
