Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Spinal Surgical Robots market for 2018-2023. Spinal surgery has evolved dramatically over the years as advances in technology have made it possible to improve surgical techniques. Spinal surgery involves the modification of the affected area of the back bones and nerves. The implantation of one or more screws or components is a very delicate surgery. The robot can achieve better precision than can a skilled surgeon. Robotic procedures offer significant cost savings in terms of pre- and post-operation care costs and length of stay at hospitals. Technological advances and breakthroughs leverage new materials and new sensor configurations. Sophisticated software is further evolving product implementation: Clinically efficient solutions, Clinically less complex surgery, Shorter length of stay, Minimally invasive surgery, Financially lower cost and Operationally more simple.

North America is the largest sales region for Spinal Surgical Robots which the sales number is about 96 units with the market share of 67% in 2017. Europe is the second largest sales region of Spinal Surgical Robots sales about 24Unit.

Over the next five years, LPI(LP Information) projects that Spinal Surgical Robots will register a 33.6% CAGR in terms of revenue, reach US\$ 380 million by 2023, from US\$ 67 million in 2017.
