Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Spray Dryer market for 2018-2023.

Spray drying is an industrial process for dehydration of a liquid feed containing dissolved and/or dispersed solids, by transforming that liquid into a spray of small droplets and exposing these droplets to a flow of hot air. The very large surface area of the spray droplets causes evaporation of the water to take place very quickly, converting the droplets into dry powder particles.

A spray dryer refers the machinery that takes a liquid stream and separates the solute or suspension as a solid and the solvent into a vapor. The solid is usually collected in a drum or cyclone. The liquid input stream is sprayed through a nozzle into a hot vapor stream and vaporized. Solids form as moisture quickly leaves the droplets. A nozzle is usually used to make the droplets as small as possible, maximizing heat transfer and the rate of water vaporization. Droplet sizes can range from 20 to 180 μ m depending on the nozzle. There are two main types of nozzles: high pressure single fluid nozzle (50 to 300 bars) and two-fluid nozzles: one fluid is the liquid to dry and the second is compressed gas (generally air at 1 to 7 bars).

Spray dryers can dry a product very quickly compared to other methods of drying. They also turn a solution, or slurry into a dried powder in a single step, which can be advantageous as it simplifies the process and improves profit margins.

Geographically, the consumption market is leading by North America and Europe, sales in Asia Pacific regions like China, Japan, Southeast Asia and India will see significant growth in future period. In terms of year 2017, Europe holds the largest market share, with about 371 Million USD sales revenue, followed by Asia Pacific, with about 29.5% market share in 2017. North America will keep playing important role in Global market.

Over the next five years, LPI(LP Information) projects that Spray Dryer will register a 5.1% CAGR in terms of revenue, reach US\$ 1440 million by 2023, from US\$ 1070 million in 2017.
