In this report, LP Information studies the present scenario (with the base year being 2017) and the growth prospects of global SSL VPN market for 2018-2023.

An SSL VPN (Secure Sockets Layer virtual private network) is a form of VPN that can be used with a standard Web browser. In contrast to the traditional Internet Protocol Security (IPsec) VPN, an SSL VPN does not require the installation of specialized client software on the end user's computer. It's used to give remote users with access to Web applications, client/server applications and internal network connections.

A virtual private network (VPN) provides a secure communications mechanism for data and other information transmitted between two endpoints. An SSL VPN consists of one or more VPN devices to which the user connects by using his Web browser. The traffic between the Web browser and the SSL VPN device is encrypted with the SSL protocol or its successor, the Transport Layer Security (TLS) protocol.

The technical barriers of SSL VPN are relatively high, and the SSL VPN market concentration degree is relatively higher. The manufacturing bases concentration around the world in terms of geography; some of the key players dominating this market are Pulse Secure, F5, Cisco, SonicWALL, Citrix and others.

In the past few years, as the main raw material price was relatively stable, with the addition of a sharp increase in production capacity, expected that the SSL VPN raw material price will be stable in the short term. However, the improvement of energy, transportation costs, and employee wages, will play a significant role in promoting the cost of SSL VPN.

USA is the world's largest producer of SSL VPN; as the same time, the consumption of SSL VPN in USA grown gradually. In the result, SSL VPN in USA was export-oriented

until now.

Over the next five years, LPI(LP Information) projects that SSL VPN will register a 4.3% CAGR in terms of revenue, reach US\$ 1610 million by 2023, from US\$ 1250 million in 2017.
