In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global SSPA Satcom Amplifiers market for 2018-2023.

SATCOM Amplifier is an electronic amplifier or electronic device that can increase the power of a signal (a time-varying voltage or current). An amplifier functions by using electric power from a power supply to increase the amplitude of the voltage or current signal. An amplifier is effectively the opposite of an attenuator: while an amplifier provides gain, an attenuator provides loss. Solid State Power Amplifier (SSPA) is a kind of SATCOM Amplifiers.

The leading companies own the advantages on better performance, more abundant product's types, better technical and impeccable after-sales service. Consequently, they take the majority of the market share of high-end market. Looking to the future years, the slow downward price trend in recent years will maintain. As competition intensifies, prices gap between different brands will go narrowing. Similarly, there will be fluctuation in gross margin.

Over the next five years, LPI(LP Information) projects that SSPA Satcom Amplifiers will register a 4.8% CAGR in terms of revenue, reach US\$ 720 million by 2023, from US\$ 540 million in 2017.
