## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Stationary Fuel Cells market for 2018-2023.

Stationary fuel cells generate electricity through an electrochemical reaction, not combustion, providing clean, efficient, and reliable off-grid power to homes, businesses, telecommunications networks, utilities, and others.

Stationary fuel cells are quiet and have very low emissions, so they can be to be installed nearly anywhere. These systems provide power on-site directly to customers, without the efficiency losses of long-range grid transmission.

Stationary fuel cell systems also take up much less space in proportion to other clean energy technologies. For instance, a 10 megawatt (MW) fuel cell installation can be sited in a about an acre of land. This is compared to about 10 acres required per MW of solar power and about 50 acres per MW of wind.

The classification of Stationary Fuel Cells includes 0-1 KW, 1-4 KW, 4 KW, and the proportion of 0-1 KW in 2015 is about 43%.

JP & KR region is the largest supplier of Stationary Fuel Cells, with a production market share nearly 75% in 2015. USA is the second largest supplier of Stationary Fuel Cells, enjoying production market share nearly 15% in 2015.

Over the next five years, LPI(LP Information) projects that Stationary Fuel Cells will register a 24.2% CAGR in terms of revenue, reach US\$ 10900 million by 2023, from US\$ 2980 million in 2017.
