Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Stationary Lead Acid Battery market for 2018-2023.

Lead-Acid battery uses a chemical reaction to do work on charge and produce a voltage between their output terminals. Despite having a very low energy-to-weight ratio and a low energy-to-volume ratio, its ability to supply high surge currents means that the cells have a relatively large power-to-weight ratio. Stationary Lead-Acid battery widely used in UPS, Telecommunication applications, Utility/switchgear, etc.

On the basis of applications the market is segmented as UPS and others applications. UPS (including stationary industrial) application segment is identified as one of the fastest growing market during the forecast period.

We tend to believe this industry now is close to mature, and the consumption increasing degree will show a smooth curve. On product prices, the slow downward trend in recent years will maintain in the future, as competition intensifies, prices gap between different brands will go narrowing. Similarly, there will be fluctuation in gross margin.

Over the next five years, LPI(LP Information) projects that Stationary Lead Acid Battery will register a 4.2% CAGR in terms of revenue, reach US\$ 10200 million by 2023, from US\$ 8020 million in 2017.
