Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Stem Cells Cryopreservation Equipments market for 2018-2023.

Stem Cells Cryopreservation Equipment (SCCE) is medical equipment used in the freezing and storage for stem cells. Cryopreservation is the use of low temperatures to preserve structurally intact living stem cells.

The technical barriers of SCCE are high, and the core technology of SCCE concentrates in relative large companies including Chart, Worthington Industries, Cesca Therapeutics, Shengjie Cryogenic Equipment, Sichuan Mountain Vertical, and Qingdao Beol. These companies concentrate in USA, China. However, about 37.5% of SCCE are mainly consumed by the China, and US was the second larger consumer. China mainly imports SCCE from US market every year.

SCCE is widely used in storage and therapy of stem cells. As the demand increases rapidly with higher spending propensity, a rising demand for self-storage of cord blood stem cells in global market, and the demand for donation and treatment for repairing the body by dividing to replenish cells that are damaged by disease, injury, or normal wear, the demand for SCCE is expected to continue increasing during the remaining years of the forecast period of 2016-2022. SCCE industry will usher in a stable growth space.

In the past few years, the price of SCCE slightly decreased and we expect the price will continue lower. However, the improvement of energy, transportation costs, employee wages, and equipment depreciation will play a significant role in promoting the cost of SCCE.

Over the next five years, LPI(LP Information) projects that Stem Cells Cryopreservation

Equipments will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
