Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Submarine Battery market for 2018-2023. Submarines need large amounts of electricity to operate safely under water. They charge their batteries using diesel or nuclear-driven generators. Diesel subs must surface to recycle their batteries because carbon monoxide fumes are deadly. Nuclear ones can remain under water for months and even years.

The industry is expected to remain innovation-led, optimize product mix and further develop value-added capabilities to maximize margins. The biggest customer is still the military submarine.

Despite the presence of competition problems, due to the global recovery trend is clear, investors are still optimistic about this area, the future will still have more new investment enter the field. Even so, the market is intensely competitive. The study group recommends the new entrants just having money but without technical advantage and upstream and downstream support do not to enter into this field.

Over the next five years, LPI(LP Information) projects that Submarine Battery will register a 5.3% CAGR in terms of revenue, reach US\$ 450 million by 2023, from US\$ 330 million in 2017.
