Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Sulfur Coated Urea market for 2018-2023.

Sulfur Coated Urea (SCU) is a particle of urea enclosed within a sulfur coating. SCU fertilizers release nitrogen via water penetration through cracks and micropores in the coating. Once water penetrates through the coating, nitrogen release is rapid. The fertilizer may be sealed with wax to slow release. The size of fertilizer particles may also be varied in order to vary the time at which nitrogen release occurs.

The Sulfur Coated Urea industry concentration is high, which focus in China, North America and Southeast Asia. The HanFeng is the most important manufacturer in China. However, the manufacturers made high-end products mainly in North America and Japan.

We tend to believe this industry now is close to mature, and the consumption increasing degree will show a smooth curve. On product prices, the slow downward trend in recent years will maintain in the future, as competition intensifies, prices gap between different brands will go narrowing. Similarly, there will be fluctuation in gross margin.

Over the next five years, LPI(LP Information) projects that Sulfur Coated Urea will register a -2.7% CAGR in terms of revenue, reach US\$ 330 million by 2023, from US\$ 390 million in 2017.
