The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Super-Resolution Microscope market for 2018-2023.

Super-resolution microscopy is a form of light microscopy. Due to the diffraction of light, the resolution of conventional light microscopy is limited, as stated by Ernst Abbe in 1873.[1] A good approximation of the resolution attainable is the full width at half maximum (FWHM) of the point spread function, and a precise widefield microscope with high numerical aperture and visible light usually reaches a resolution of ~250 nm. Super-Resolution Microscope industry has much fragmented, manufacturers are mostly in the Europe. Among them, Europe Production value accounted for less than 49.51% of the total value of global Super-Resolution Microscope in 2016. Leica Microsystems is the world leading manufacturer in global Super-Resolution Microscope market with the market share of 21.34% in 2016.

In the past few years, as the main raw material price was reduced, with the increasing in production capacity, expected that the Super-Resolution Microscope raw material price will be stable in the future. However, the improvement of energy, transportation costs, and labor costs, will play a significant role in promoting the cost of Super-Resolution Microscope.

Over the next five years, LPI(LP Information) projects that Super-Resolution Microscope will register a 19.0% CAGR in terms of revenue, reach US\$ 4730 million by 2023, from US\$ 1670 million in 2017.
