## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Superalloy market for 2018-2023.

Super alloy that exhibit excellent mechanical strength and creep resistance at high temperatures, good surface stability, and corrosion and oxidation resistance. They typically have an austenitic face-Center, June 2015ed cubic crystal structure with a base alloying element of nickel, cobalt, or nickel-iron. The development of superalloy has primarily been driven by the aerospace and power industries.

As a kind of advanced material, the production of superalloy highly relies on the downstream demand. Aerospace is the biggest market of superalloy, which takes more than 58.24% of total superalloy production in last year. IGT (electricity) and IGT (mechanical) are also major application of superalloy.

The import and export percent of this industry is high. North America and Europe are the main regions that export superalloy, with China the main import region. Technology is a vital factor in superalloy industry. The import and export of superalloy is limited the numbers.

The global superalloy industry would keep increasing with annual growth rate with 4%, and a little higher speed in China. We tend to believe this industry now is now in fast development, and the demand increasing degree will show a smooth curve.

Over the next five years, LPI(LP Information) projects that Superalloy will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
