## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Switch Dimmer market for 2018-2023.

Switch Dimmers are devices connected to a light fixture and used to lower the brightness of light. By changing the voltage waveform applied to the lamp, it is possible to lower the intensity of the light output. Although variable-voltage devices are used for various purposes, the term dimmer is generally reserved for those intended to control light output from resistive incandescent, halogen, and (more recently) compact fluorescent lights (CFLs) and light-emitting diodes (LEDs). More specialized equipment is needed to dim fluorescent, mercury vapor, solid-state, and other arc lighting. Dimmers range in size from small units the size of domestic light switches to high-power units used in large theatrical or architectural lighting installations.

The Europe is the largest market of Switch Dimmer, which occupies 26.1% of global market in 2017. It is followed by North America, which have around 24.91% of the global total industry. Other main regions which take important part in this industry include China and some Industrial countries.

Over the next five years, LPI(LP Information) projects that Switch Dimmer will register a 5.1% CAGR in terms of revenue, reach US\$ 1570 million by 2023, from US\$ 1160 million in 2017.
