In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Switch Mode Power Supply Transformers market for 2018-2023.

The Switch Mode Power Supply Transformers (SMPS Transformers) is transformers for switching power supplies, using in a regulated power supply and function to step up or step down voltage or current, and/or provide isolation between the input and output side of a switch mode power supply. On the primary side of a switch mode transformer, the duty cycle (on time) of the input voltage waveform is varied (switched) to deliver a constant output voltage over varying load conditions. Switch Mode Power Supply Transformers (SMPS transformers) are designed to operate at frequencies of 10 kHz to 1 MHz Switch mode transformer (switch mode power supply transformer) power levels now extend into the 50 kilowatt range.

With the rapid development of communication industry, industrial electrification and consumer electronic products, all kinds of equipment for power supply requirements getting higher and higher. Switch Mode Power Supply Transformers have been widely used.

Because it has little technical difficulty, so there are so many manufacturers of Switch Mode Power Supply Transformers all over the world. Because of cost considerations, a number of international manufacturers shift their factories to Asia, in particular China.
