Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Synthetic Diamond market for 2018-2023. A synthetic diamond (also known as an artificial diamond, cultured diamond, or cultivated diamond) is diamond produced in an artificial process, as opposed to natural diamonds, which are created by geological processes.

With Chinese overall economic downward trend in the past few years and complicated international economic situation, there will be many uncertainties in the next few years. But for synthetic diamond industry, due to its widely downstream applications in industries like machining, electronics, solar energy, etc., it is still promising for the market development in the future.

As a result of enlarged production scale and new technology being introduced, the cost of synthetic diamond is keeping declining, which enhances its competitiveness against other carbon alloy products.

For synthetic diamond product, China has a substantial market share with more than 90%, especially in low grade products. As China's main equipment keeps upgrading, it is expected that China will keep its position in the synthetic diamond market and will enlarge its share in high grade products.

Over the next five years, LPI(LP Information) projects that Synthetic Diamond will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.

This report presents a comprehensive overview, market shares, and growth opportunities of Synthetic Diamond market by product type, application, key
