In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Synthetic Fabrics market for 2018-2023. Synthetic fabrics are textiles made from man-made rather than natural fibers. Examples of synthetic fabrics include polyester, acrylic, nylon, rayon, acetate, spandex, latex, Orlon and Kevlar. Synthetic (chemically produced) fabrics are made by joining monomers into polymers, through a process called polymerization.

The synthetic fabric market is expected to be driven by its high demand in fashion & apparel industry and high growth rate of construction and automotive industries, especially in emerging economies,. However, environmental concerns and threat from natural substitutes may restrain the market growth during the forecast period. Moreover, R&D activities on conductive textiles and nanotechnology in textiles are expected to provide potential growth opportunities.

The global synthetic fabric market is segmented based on the basis of type, application, and geography. Based on type, it is divided into acetate fabric, acrylic fabric, chiffon fabric, denim fabric, georgette fabric, nylon fabric, polyester fabric, rayon fabric, spandex fabric, viscose fabric, and others. On the basis of application, it is classified into construction, automotive, healthcare, apparel, household, and others.

Geographically, it is analyzed across North America, Europe, Asia-Pacific, and LAMEA.

Over the next five years, LPI(LP Information) projects that Synthetic Fabrics will register a 2.6% CAGR in terms of revenue, reach US\$ 18600 million by 2023, from US\$ 16000 million in 2017.
