Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Synthetic Fibre Rope market for 2018-2023. A rope is a bundle of flexible fibers twisted or braided together to increase its overall length and tensile strength. The use of ropes for hunting, carrying, lifting, and climbing dates back to prehistoric times. Ropes were originally made by hand using natural fibers. Modern ropes are made by machines and utilize many newer synthetic materials to give them improved strength, lighter weight, and better resistance to rotting. More than half of the rope manufactured today is used in the fishing and maritime industries. Global market for Synthetic Fibre Rope is growing slowly in the past few years due to the continued impact of reduced customer spending on upstream offshore oil & gas related demand (exploration, drilling and commissioning activities) and competitive pricing pressures. Despite of this, the Synthetic Fibre Rope is rapidly replacing steel ropes due to superior characteristics, and has a huge demand in the emerging markets in Asia-Pacific region.

Over the next five years, LPI(LP Information) projects that Synthetic Fibre Rope will register a 3.3% CAGR in terms of revenue, reach US\$ 1470 million by 2023, from US\$ 1210 million in 2017.
