The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Synthetic Pyrethroids market for 2018-2023.

Synthetic pyrethroids are analogues of the natural pyrethrins and have a broad spectrum of activity against external parasites (flies, ticks, mites, fleas, lice, mosquitoes, etc.). The insecticidal properties of pyrethrins are derived from ketoalcoholic esters of chrysanthemic and pyrethroic esters of chrysanthemic and pyrethroic acids.

In the world wide, synthetic pyrethroids (TC) manufactures mainly distribute in China and India. China has the largest production in the world and exports worldwide, like Yangnong Chemical and Jiangsu RedSun, both have large production capacity. As to western countries, the companies there usually import synthetic pyrethroids (TC) for the manufacture of pesticides and insect repellent.

All manufactures in the world are committed to the improvement of product.

International companies have been leading the R&D level in the past. These two years, some Chinese manufactures can almost catch up with the world's leading technology too.

Just few manufacturers can produce intermediate. And these manufacturers which have complete industrial chain have certain advantages in the cost of raw materials.

Over the next five years, LPI(LP Information) projects that Synthetic Pyrethroids will register a 4.7% CAGR in terms of revenue, reach US\$ 2230 million by 2023, from US\$ 1690 million in 2017.
