## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information studies the present scenario (with the base year being 2017) and the growth prospects of global Tank Cleaning Service market for 2018-2023. Chemical tankers transport an enormous variety of chemical and oil products in global and short sea trade. Due to this variety the next cargo is almost never identical with the previous cargo. Thus tank cleaning is essential on chemical and product tankers. The usable tank capacity is reduced by the volume of sludge. The tank operator needs then to clean the tank in order to re-establish its full capacity. In addition to this, national inspection regulations require a leak test every five or 10 years (double floor). To perform this inspection, the tank needs to be completely drained and cleaned. Repair work is often performed on this occasion. The petrochemical industry and tank terminals are increasingly choosing the option of automated rather than manual tank cleaning. One trend in the market is increasing market for tank cleaning systems as a service. Tank Cleaning Systems that not only clean the tank from inside but also extract hydrocarbons from the sludge have high upfront costs. The Asia-Pacific will occupy for more market share in following years, especially in China, also fast growing India and Mideast regions.

Over the next five years, LPI(LP Information) projects that Tank Cleaning Service will register a 3.8% CAGR in terms of revenue, reach US\$ 580 million by 2023, from US\$ 470 million in 2017.
