In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Telescope and Hand-held Later Rangefinder market for 2018-2023.

A laser rangefinder is a rangefinder which uses a laser beam to determine the distance to an object, which has been in use as early as the introduction of lasers; it is a useful optical method for measuring distance. LRF is based on time-of-flight method, and it employs light waves. This technique is based on a transmission of a short pulse of electromagnetic radiation and the reception of back scattered signals from a target.
