In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Tertiary Amines market for 2018-2023.

Tertiary amine is an amine that has the following general structural formula. In tertiary amines, nitrogen has three organic substituents. Examples include trimethylamine, which has a distinctively fishy smell, and EDTA. The use of tertiary amines is very extensive and is an important intermediate for the preparation of quaternary ammonium salts. It is widely used in the production of asphalt emulsifiers, chemical antistatic agents, foaming agents, oilfield demulsifiers, pesticide emulsifiers and fabric softeners. The global average price of Tertiary Amines is in the decreasing trend, from 3292 USD/MT in 2012 to 3144 USD/MT in 2016. With the situation of global economy, prices will be in decreasing trend in the following five years.

China is the largest producer of Tertiary Amines, with a production market share nearly 45% in 2016. India is the second largest producer of Tertiary Amines, enjoying production market share nearly 18% in 2016.

In the future, the production and consumption is estimated to continue developing with a stable growth rate. To meet the large and increasing demand, more and more manufacturers will go into this industry.

Over the next five years, LPI(LP Information) projects that Tertiary Amines will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
