Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Tipper market for 2018-2023.

Though there are several different Tipper designs, the basic components of Tippers remain more or less the same for all of them. The main body of the Tipper is generally based on that of a flatbed truck, with one axle beneath the cab and anywhere from one to three axles beneath the dump box. The dump box itself generally has a tailgate that is hinged at the top so that it will open automatically when it is being dumped. The dumping mechanism is powered hydraulically in order to prevent compression problems that can sometimes be encountered when using pneumatic systems. The engine of the Tipper can be either gasoline-powered or diesel-powered, but is generally a large internal combustion engine regardless of the fuel type used.

Tipper is widely used in Building Construction, Mining Industry, etc. The most proportion of Tipper is Building Construction, with market share of 72.48%. The trend of Building Construction is slowly decreasing.

China is the largest supplier of Tipper, with a production market share nearly 45.43% in 2016. Europe is the second largest supplier of Tipper, enjoying production market share nearly 17.26% in 2016.

China is the largest consumption place, with a consumption market share nearly 36.70% in 2016. Following China, Europe is the second largest consumption place with the consumption market share of 15.53%.

Over the next five years, LPI(LP Information) projects that Tipper will register a xx% CAGR in terms of revenue, reach US\$ 14900 million by 2023, from US\$ 14900 million in 2017.
