In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Tire Chemicals market for 2018-2023.

Tires manufactures in automobile sector use various chemicals such as, natural rubber, synthetic rubber, carbon black, sulphur, fillers and synthetic textile to enhance different properties in tires like tensile strength, tear strength, abrasion resistance, crack growth resistance, rolling strength and strong grip.

Tire chemicals market witnessed a significant decline all across the world over the past few years, on account of oversupply of natural and synthetic rubber by various Asian countries, which created a situation of demand deficit in the global tire chemicals market. Consequently, resulting in declining prices of natural and synthetic rubber globally. However, increasing government interventions in these Asian countries is expected to positively affect market revenues for natural and synthetic rubber across the world in the coming years, thereby propeling global tire chemicals market during the forecast period.

Over the next five years, LPI(LP Information) projects that Tire Chemicals will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
