## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Tonometer market for 2018-2023.

A tonometer is an instrument that exploits the physical properties of the eyes to permit measurement of pressure without the need to cannulate the eyes.

Tonometer is an instrument used for the determination of the intraocular pressure or the pressure of the fluid within the eye. Tonometer is equipped to measure the intraocular pressure by determining the resistance of the cornea to indentation. The normal intraocular pressure ranges from 12 to 22 mm Hg according to the Glaucoma Research Foundation, and the tonometer measures in units of "mmHg" which is the unit used to record eye pressure. Glaucoma is an eye disease in which the optic nerve is damaged. The buildup of the pressure of the extra fluid inside the eye damages the optic nerve, and if this is left unattended, it may first cause peripheral vision loss and could lead to permanent loss of vision.

The leading companies own the advantages on better performance, more abundant product's types, better technical and impeccable after-sales service. Consequently, they take the majority of the market share of high-end market. Looking to the future years, the slow downward price trend in recent years will maintain. As competition intensifies, prices gap between different brands will go narrowing. Similarly, there will be fluctuation in gross margin.

Despite the presence of competition problems, due to the global recovery trend is clear, investors are still optimistic about this area, the future will still have more new investment enter the field. Even so, the market is intensely competitive. The study group recommends the new entrants just having money but without technical advantage and

upstream and downstream support do not to enter into this field.

Over the next five years, LPI(LP Information) projects that Tonometer will register a 4.9% CAGR in terms of revenue, reach US\$ 240 million by 2023, from US\$ 180 million in 2017.
