In this report, LP Information studies the present scenario (with the base year being 2017) and the growth prospects of global Transcatheter Aortic Valve Replacement (TAVR) market for 2018-2023.

Transcatheter Aortic Valve Replacement (TAVR), also referred as Transcatheter Aortic Valve Implantation (TAVI) is a minimally invasive surgical procedure repairs the valve without removing the old, damaged valve. Instead, it wedges a replacement valve into the aortic valve's place. Normally valve replacement method requires an open heart procedure with a sternotomy, in which the chest is surgically separated for the treatment. The TAVR procedures can be done through very small openings that leave all the chest bones in place.

The classification of Transcatheter Aortic Valve Replacement (TAVR) includes transfemoral approach, transapical approach and others. The proportion of transfemoral approach in 2016 is about 84%.

Transcatheter Aortic Valve Replacement (TAVR) is widely used for aortic stenosis, aortic regurgitation and other diseases. The most proportion of Transcatheter Aortic Valve Replacement (TAVR) is used for aortic regurgitation, and the proportion in 2016 is 75%.

Europe is the largest consumption place, with a consumption market share nearly 53% in 2016. Following Europe, North America is the second largest consumption place with the consumption market share of 40%.
