In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Transcranial Magnetic Stimulators market for 2018-2023.

Transcranial magnetic stimulation (TMS) is a magnetic method used to stimulate small regions of the brain. During a TMS procedure, a magnetic field generator, or 'coil', is placed near the head of the person receiving the Tinnitus. The coil produces small electric currents in the region of the brain just under the coil via electromagnetic induction. The coil is connected to a pulse generator, or stimulator, that delivers electric current to the coil.

Over the next five years, LPI(LP Information) projects that Transcranial Magnetic Stimulators will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
