Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Transformers market for 2018-2023.

A transformer is an electrical device that transfers energy between two or more circuits through electromagnetic induction. In grid networks, two main types of transformers are used – power transformers and distribution transformers.

Along with the development of Chinese domestic Transformer industry, the performance distance will shorten gradually, compared with the imported Transformer.

As large demand of high-end products at home and abroad, many companies begin to focus on the field of high end. Currently, the Chinese Transformer industry tries to transit to high-end Transformer field actively, as well as extends downstream industry chain.

Over the next five years, LPI(LP Information) projects that Transformers will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.

This report presents a comprehensive overview, market shares, and growth opportunities of Transformers market by product type, application, key manufacturers and key regions.
