Radar control system is an equipment of providing air traffic control services with the use of radar. The provision of air traffic control services without the use of radar is called procedural control. With the evolution of technology, the requirement of transportable radar control system was generated. Transportable radar control system (TRCS) is a compact air traffic control system transportable by a truck, aircraft or helicopter. Radar control systems are used to provide air traffic control services. With the evolution of technology, the requirement of transportable radar control system was generated. Transportable radar control systems are designed to deliver a safe and effective airspace processes wherever air traffic management is not accessible. The transportable radar control system is very compact in size and is highly portable such that it can be carried easily by truck or aircraft. These systems can graphically represent the detection of an aircraft. These control systems can search, acquire, track and then discriminate threats from non-threats.

The industry is relatively concentration, the key brand include Lockheed Martin Corporation, Raytheon Company, NEC Corporation, Northrop Grumman, Harris Corporation, Leonardo, Indra Sistemas and so on. Among them, Lockheed Martin Corporation and Raytheon Company are the leaders.
