Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Triazine market for 2018-2023.

A triazine is class of nitrogen-containing heterocycles. The parent molecules' molecular formula is $C_3H_3N_3$. They exist in three isomeric forms, 1,3,5-triazines being common. MMA Triazine is a cyclic tertiary triamine. It is mainly used as a scavenger for sour gases like H_2S and mercaptans in gaseous or liquid hydrocarbon streams.

MEA-triazine is the most commonly used chemistry for applications requiring a non-regenerative H_2S scavenger. Other chemistries are available (MMA-triazine, glyoxal, zinc-based, iron-based, and others) but MEA-triazine has the highest market share because it is the lowest cost in use solution. Triazines are low cost in use despite the fact that the molar efficiency of the chemistry in capturing H_2S is significantly below theoretical maximum efficiency.

For production, the NA consumption of triazine has reached 49 K MT by the end of year 2017, with annual growth rate around 1.5% during the past years. Growing attention has been raised in the application of triazine in medical and oil and gas industry, which makes it in fast development in recent years.

For the market, the global triazine market is worth over 157.54 Million USD, according to our survey. Actually, the market of triazine is far from mature. However, as production of raw materials like palm and coconuts are limited to Southeast Asia, the competition structure would not change significantly in the following years.

For price trend analysis, a key variable in the performance of triazine producers is raw material costs, specifically the speed at which any increase can be passed through to customers.

Over the next five years, LPI(LP Information) projects that Triazine will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
