## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Triple Offset Butterfly Valves market for 2018-2023.

Triple offset butterfly valves have the same component as a concentric butterfly valve. A triple offset butterfly valve is usually metal to metal seat configuration valve. With this design the valve can achieve zero-leakage. Typically a triple offset butterfly valve has no cavity to allow build-up.

Triple offset butterfly valve covered the triple offset butterfly valve made by carbon steel, stainless steel, alloy steel and others. They are widely used in Oil and Gas, Petrochemical, Energy Power Generation and other industry.

Europe is the largest market of Triple offset butterfly valves based on production revenue and account for 29.32% of the revenue market in 2016.

In the next few years, the annual growth rate will be about 4.08% from 2017 to 2022, there will be about 352.7 K ton produced in 2022. And it is forecasted that Europe will still be the largest production regions, occupied 29.32% market share, followed by North America.

We tend to believe that this industry has a bright future, considering the current demand of triple offset butterfly valves. As for product prices, the slow downward trend in recent years will continue in the next few years, as competition intensifies. Similarly, there will be fluctuations in gross margin.

Over the next five years, LPI(LP Information) projects that Triple Offset Butterfly Valves will register a 3.2% CAGR in terms of revenue, reach US\$ 640 million by 2023, from

US\$ 530 million in 2017.
