In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Troponin market for 2018-2023.

Troponin, or the troponin complex, is a complex of three regulatory proteins (troponin C, troponin I, and troponin T) that is integral to muscle contraction in skeletal muscle and cardiac muscle, but not smooth muscle.

Discussions of troponin often pertain to its functional characteristics and/or to its usefulness as a diagnostic marker or therapeutic target for various heart disorders in particular as a highly specific marker for myocardial infarction or heart muscle cell death.

A troponin test measures the levels troponin T or troponin I proteins in the blood. These proteins are released when the heart muscle has been damaged, such as occurs with a heart attack.

The classification of Troponin includes Troponin I (TnI), Troponin T (TnT), the sales of Troponin I (TnI) are 181 million units, with its market share 80.6%. In addition, the sales market share of Troponin T (TnT) is 19.4% in 2017.

North America region is the largest supplier of Troponin, with a production market share nearly 47.2% in 2017. Europe is the second largest supplier of Troponin, enjoying revenue market share nearly 36.2% in 2017.

North America is the largest sales place, with market share nearly 41.5% in 2017.

Following North America, China is the second largest sales place with the sales market share of 19.7% in 2017.

Over the next five years, LPI(LP Information) projects that Troponin will register a 9.5% CAGR in terms of revenue, reach US\$ 1820 million by 2023, from US\$ 1050 million in 2017.
