In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Ultrafiltration Membrane Filtration market for 2018-2023.

This report studies the Ultrafiltration Membrane Filtration market, Ultrafiltration (UF) is a variety of membrane filtration in which forces like pressure or concentration gradients lead to a separation through a semipermeable membrane. Suspended solids and solutes of high molecular weight are retained in the so-called retentate, while water and low molecular weight solutes pass through the membrane in the permeate (filtrate). Global giant manufactures mainly distributed in China, U.S. and E.U., They take a market share of 81.84% in 2016. China is the biggest producer. It accounts about 38.6% of global production.

Inorganic Membrane products market is rarely small compare to the Organic Membrane products. Inorganic product is dominated by ceramic membrane, and its price is 4-8 times higher than that of PVDF products, and usually used in the acid and alkali resistant environment, like pharmaceutical industry.

The key consumption markets locate at developed countries. Europe takes the market share of 27%, and United States is with 21%. China's consumption market has a quicker growing speed of CAGR 7.2%.

Over the next five years, LPI(LP Information) projects that Ultrafiltration Membrane Filtration will register a 5.2% CAGR in terms of revenue, reach US\$ 2980 million by 2023, from US\$ 2200 million in 2017.
